

VIBE BUILDERS CIRCLE

9/19, 2026

Minha Hwang

VIBE BUILDERS' CIRCLE: SCHEDULE

- **10:00 - 10:15 am: Arrival, check-in, and mingling**
- **10:15 - 10:45 am: Welcome, quick introductions, and project ideas**
- **10:45 - 12:30 pm: Open build session—code, collaborate, troubleshoot & share tips**
- **12:30 - 13:00 pm: Optional demos, wrap-up, and clean up**

WHY WE ARE HERE

Three principles that guide every session

Learn by Doing

Less planning, more building. We gain real expertise through hands-on action and experimentation.

Meet New People

Find your crew. Cross-pollinate ideas with a community of driven, like-minded creators.

Have Fun

Protect the vibe. We're here to enjoy the creative journey together.

VIBE CODING PROJECTS: CANDIDATE THEMES

Aspirational

- **Multimodal Apps** with Open-Source Local Models: Desktop or Mobile
 - Open-Source Local Models
 - Eleven Labs API
 - Google Gemini API
 - [Open Model Summary](#)
 - [Mobile App Template](#)

Simple

- **Recreate Existing Apps** with Your Twists
 - A simple note apps: Apple Notes, Google Keep
 - Video Streaming apps: Netflix
 - Audiobook apps: Audi8ble
 - QR code generator
 - ChatGPT UI
 - Weather App

Bring Your Own

- **Bring Your Own Ideas**

VIBE CODING 101 – GAME APP FROM SINGLE PROMPT** (1/5)

(1) Brick Breaker

Make a brick breaker game. There's a paddle at the bottom that follows my mouse, a ball that bounces around, and rows of colorful bricks at the top that disappear when the ball hits them. Show my score and how many lives I have left. Give me 5 lives. Add a start screen and a "you win" screen. Make it look bright and arcade-y, and add a little sparkle burst when a brick breaks. Add a button that makes the paddle wider

(2) Memory Match

Make a memory matching game with 16 cards face down. I flip two at a time and if they match they stay up. Use fun emoji on the cards. Count my moves and celebrate when I clear the board.

(3) Snake

Make the classic snake game. Arrow keys to move, eat the dots to grow, don't hit the walls or yourself. Show the score and a game over screen with a restart button. Make it look like an old Nokia phone.

(4) Two-player Pong

Make a two-player pong game on one keyboard. One person uses W and S, the other uses the up and down arrows. First to 5 wins. Big retro scoreboard in the middle.

VIBE CODING 101 - FUN APP FROM SINGLE PROMPT** (2/5)

(5) Name Spinner

Make me a spinning wheel that picks a random name. I want to type in a list of names and hit spin. Make it actually spin and slow down, with a drumroll feeling, and confetti when it lands on someone.

(6) Countdown

Make me a countdown to December 25th. Big numbers, days hours minutes seconds, ticking live. Make it feel festive and cozy. When it hits zero I want fireworks.

(7) Meeting Cost Ticker

Make a timer that shows how much money a meeting is costing while it runs. I type in how many people are in the room and their rough hourly rate, hit start, and watch the dollar amount climb.

(8) Silly Quiz

Make a 5-question quiz called "What kind of coffee are you?" Fun questions, four choices each, and at the end tell me my result with a description and an emoji. Make it colorful.

VIBE CODING 101 - UTILITY APP FROM SINGLE PROMPT** (3/5)

(9) Bill Splitter

Make something that splits a restaurant bill. I put in the total, how many people, and how much tip, and it tells me what each person owes. Make it look nice, not like a calculator.

(10) Throw Messy Data

Build a dashboard where I paste in CSV data or upload a file, and it automatically detects the columns, guesses which are dates/numbers/categories, and generates the right charts. Let me pick which column to group by. Include summary stats at the top and a sortable table below. Handle missing values gracefully instead of crashing.

(11) Interactive Compound Interest Visualizer

Build me an interactive compound interest visualizer. Sliders for starting amount, monthly contribution, annual return %, and years. Show a line chart that updates live comparing total contributions vs. total value, plus a big headline number for the final balance and how much of it was growth. Warm, friendly design — rounded cards, one accent color. Add a preset button for "start at 25 vs. start at 35" so I can see the gap.

VIBE CODING 101 - WEB APP FROM SINGLE PROMPT* (4/5)

(12) Fireworks

Build an interactive fireworks show. When I click anywhere on the screen, launch a firework from the bottom to that point and explode it into colorful particles with realistic gravity and fade. Add a dark night sky background with stars. Include a button to launch a random automatic show of multiple fireworks.

(13) Color Palette Generator

Build a color palette generator. Let me pick a base color with a color picker or hex input, then show 5-color harmonies (complementary, analogous, triadic, tetradic, monochromatic) I can switch between with tabs. Tapping any swatch copies its hex code to the clipboard with a toast confirmation. Include a shuffle button that picks a random pleasant base color. Make it clean and modern — the kind of thing you'd actually open on your phone.

VIBE CODING 101 - WEB APP FROM SINGLE PROMPT* (5/5)

(14) Pomodoro Timer

Build a 25-minute pomodoro timer with a circular progress ring that drains as time passes. Include start, pause, and reset buttons. When time hits zero, play a short beep and show a "Break time!" message.

(15) Memory Card Matching Game

Build a memory card matching game. Show a 4x4 grid of face-down cards with emoji pairs. Click to flip cards — if two match they stay face up, otherwise they flip back. Track the number of moves and time elapsed. Show a congratulations message when all pairs are found. Add a restart button.

OPEN-SOURCE / EDGE DEVICE MODELS (1/3)

HOW TO BUILD AND HOST A WEB SITE

01 Building

Replace the brackets, then paste this prompt into your AI coding assistant.

YOUR WEBSITE PROMPT

[Copy prompt](#)

Act as a web designer and developer. Build a one-page website for [project / purpose].

Audience: [who will visit]

Main action: [what visitors should do]

Sections: [e.g., intro, work, about, contact]

Content: [paste text, links, and asset details]

Style: [colors, mood, reference examples]

Features: [only what is needed]

Deliver one self-contained `index.html` with embedded CSS and minimal JavaScript. Make it responsive, accessible, and easy to edit. Use semantic HTML, readable contrast, and keyboard-friendly controls.

Use my content; flag missing facts. Make links and buttons work. Explain any feature that needs a backend or external service.

Provide the complete file, local preview steps, and simple hosting instructions. Build first; publish only when requested.

Preview: Save as `index.html`, open it in a browser, and check the layout on desktop and mobile. Test every link and button.

One useful follow-up

"Keep the content. Improve [specific issue], then return the updated file."

02 Hosting

Put your `index.html` in a folder. Choose either host below to get a shareable website address.

Netlify

[Free plan](#)

A simple upload path for an HTML website.

1. Sign in to Netlify and open [Netlify Drop](#).
2. Drag in the folder containing `index.html`.
3. Review the deployed page; publish it if it starts private. Check the shared link while signed out.

Free: \$0 with monthly usage limits. Projects can pause when the allowance is exhausted.

[Deployment guide](#) [Plan details](#)

Vercel

[Hobby · Free](#)

Upload a static page, or connect a project repository.

1. Sign in to Vercel and open [Vercel Drop](#).
2. Drag in your folder, choose your account or team and a project name, then select **Deploy**.
3. Open the resulting URL, test the page, and check that your intended visitors can access it.

Hobby: \$0 for personal, noncommercial use, within usage limits. Commercial projects need an eligible paid plan.

[Deployment guide](#) [Hobby plan details](#)

Later updates: Redeploy your revised files, or connect Git for automatic deployments. A custom domain is optional; domain registration is separate from free hosting.

VIBE CODING TOOLS BY LEARNING CURVE

Vibe coding tools have a different learning curve, environment, and degree of autonomy

VIBE CODING TOOLS: SIDE-BY-SIDE COMPARISON

Feature	Prompt-Based Tools (Replit, Base44, Lovable)	IDE-Based Tools (Cursor, GitHub Copilot, Antigravity)	CLI-Based Coding Agent (Claude Code, GitHub Copilot CLI)
Primary interface	Chat	Code editor	Terminal (CLI)
Best for	Prototypes, MVPs	Production code, research	Production code, Automation, debugging, experiments
Control level	Low-medium	High	Developer-defined
Architecture	AI-generated	Developer-defined	Developer-defined
Refactoring	Weak	Strong	Very strong (automated)
Environment access	Limited	Editor-level / Selected shell access under “agent” mode	Full shell access
Execution	No	No / Yes under “agent” mode	Yes (runs commands)
Learning curve	Very low	Moderate	Moderate-high
Team workflows	Limited	Strong	Strong (scriptable)
Deployment	Often one-click	External	Scriptable via CLI
Who it is for	Beginners, founders	Engineers, researchers	Power users, ML/infra engineers

CLAUDE CODE CLI (1/2)

	Skills	Slash Commands	Subagents	Agent Teams	Hooks
What it is	Reusable playbook / knowledge	Stored prompt / procedure	Isolated task worker	Coordinated multi-session workers	Shell scripts/prompts at lifecycle events
Auto-invoke	Yes (by Claude)	No — you trigger it	No — you ask for it	No — you set it up	Yes — always fires on matching event
Explicit invoke	<code>/name</code> or "use X skill"	<code>/name</code>	"use parallel subagents"	"create an agent team"	N/A (automatic)
Cross-platform	Yes (Code + Claude.ai)	Code only	Code only	Code only	Code only
Workers spawned	No (runs inline)	No (runs inline)	Yes — isolated contexts	Yes — persistent sessions	No (side-car scripts)

CLAUDE CODE (2/2)

	Skills	Slash Commands	Subagents	Agent Teams	Hooks
Inter-agent comms	No	No	No — reports up only	Yes — direct messaging	No
Best for	Conventions, standards, playbooks	Repeatable workflows you control	Parallel independent tasks	Multi-round collaboration	Deterministic enforcement
Side effects control	<code>disable-model-invocation: true</code>	You control timing	Inherits permissions	Inherits permissions	<code>PreToolUse</code> can block/deny
Token cost	Cheap (~100 tokens to scan)	Zero until invoked	Scales with workers	Highest — 3-4x per teammate	Zero (runs outside Claude)

CLAUDE CODE CLI: SUB AGENTS IN PARALLEL – PARALLEL WEB SEARCH

Research these 4 competitors **in parallel** using **separate sub-agents**. Each should cover: pricing page, recent product updates, G2/Trustpilot reviews, and any recent funding news. Save each to research/{company}.md

- Sub-agent 1: Notion
- Sub-agent 2: Coda
- Sub-agent 3: Confluence
- Sub-agent 4: Slab

Once all 4 finish, synthesize key differentiators into research/summary.md

CLAUDE CODE CLI: SUB AGENTS IN SEQUENTIAL CONTEXT MANAGEMENT

Process our 200-page annual report (annual-report.pdf) in **3 sequential sub-agents** to avoid filling the context window:

- Sub-agent 1: Extract all financial figures and KPIs → financials.md
- Sub-agent 2: (reads financials.md) Identify YoY trends and anomalies → trends.md
- Sub-agent 3: (reads trends.md) Write a 1-page executive summary → exec-summary.md

CLAUDE CODE CLI: AGENT TEAMS (1/2)

Compare with subagents

Both agent teams and subagents let you parallelize work, but they operate differently. Choose based on whether your workers need to communicate with each other:

How to set Agent Teams: [Open your settings file](#) (`~/claude/settings.json`) and add

```
{
  "env": {
    "CLAUDE_CODE_EXPERIMENTAL_AGENT_TEAMS": "1"
  }
}
```

How to set Agent Teams: [Alternatively](#)

`export CLAUDE_CODE_EXPERIMENTAL_AGENT_TEAMS=1` (Research Preview: Hidden Flag)

CLAUDE CODE CLI: AGENT TEAMS – MULTI-AGENT PITCH DECK REVIEW

Create an agent team to review our Series A pitch deck (pitch-deck.pdf). Spawn three reviewers:

- Narrative reviewer: assess story flow, clarity, investor hook
- Numbers reviewer: fact-check all claims, flag weak or missing data
- Devil's advocate: argue why an investor would pass (be harsh)

Have them message each other with conflicts (e.g., if the narrative makes a claim the numbers reviewer finds unsupported). Write a consolidated critique to output/[pitch-review.md](#).
